

PickMe

AI PRODUCT VISIBILITY LAB

Will an AI shopping agent pick your product?

PickMe crash-tests how shopping agents discover, understand and rank ecommerce products, then helps merchants improve verified evidence and replay the same test.

PROBLEM

A suitable product can disappear before recommendation.

- Shoppers use vague, contextual and colloquial language instead of exact keywords.
- Agents must retrieve, verify and compare evidence before recommending.
- Merchants see the outcome, but not where the agent lost confidence or why a clearer competitor won.

SOLUTION

Make the recommendation journey observable and repeatable.

- Submit a Shopwise product URL and natural buyer intent.
- Retrieve Amazon Fashion competitors and build an evidence shortlist.
- Run discovery and 100 human-style cases in parallel.
- Diagnose rank, metadata gaps and competitor advantages.
- Edit supported facts and replay the exact same suite.

HOW IT WORKS

One continuous test, diagnosis and improvement loop

KEY FEATURES

● Adversarial coverage

100 messages across simple chat, Singlish, shorthand, constraints, ambiguity and context shifts.

● Live agent activity

Streams safe reasoning summaries, actions, inspected evidence, structure validation and batch progress.

● Discovery trace

Seven checkpoints show known needs, missing information, searches, evidence and rank movement.

● Product leaderboard

Compares the target with the strongest evidence candidates and explains competitor effects.

● Metadata editor

Shows a red/green diff and product-page preview while preserving verified facts.

● Controlled validation

Reuses the exact prompts and compares score, primary rank and Top-5 coverage.

REAL-WORLD APPLICABILITY

- Pre-publish QA for Shopify, marketplace or merchant product feeds.
- Regression testing when product data or shopping-agent models change.
- Evidence-gap analysis across a brand's catalog and competitors.
- Controlled experiments for titles, features, details and use-case language.
- A defensible audit trail for why an agent recommended or rejected a product.

FUTURE POTENTIAL

- Authenticated merchant workspaces and durable shared run history.
- Shopify and product-feed ingestion with full-catalog hosted retrieval.
- Multi-model and multi-provider recommendation benchmarking.
- Confidence intervals and repeated trials for ranking stability.
- Evidence approval workflows and multimodal product-image evaluation.

PickMe turns AI product recommendations into something merchants can test, explain and improve.
